

PRODUCT DATA SHEET

Landscaping

A highly emotional table lamp, designed to create elegant ambiances through clever light-shade contrasts. The idea is developed into a product with an archetypal form – the cube – made of sheet steel, skilfully shaped in an accurate and painstaking compromise between the designer's creativity and the potentials of laser cutting. Landscaping creates dynamic scenic effects through a mix of lights and shades produced by a cylinder silkscreen printed with ink and fitted within, which moves at a controlled low speed and is designed to host to the warm punctiform light source.
