FOSCARINI

Its name, in Italian, comes from the shape of the front diffuser which recalls the wings of a moth, irresistibly drawn to the light. It is a simple and everyday image for a discreet, essential and highly functional lamp, designed to team technical and decorative features. The diffuser is a simple metallic element folded towards the observer, embellished by cut and rounded profiles. The light source is completely screened yet diffused through an opening that directs it up and down. This makes for intense, non glaring illumination.

Even when turned off, Falena generates a discreet play of light and shadow, owing to the particular shape of the metallic diffuser. Available in three different sizes and in two neutral colours – white and anthracite grey – Falena wall lamp accommodates the most diverse the most diverse lighting requirements: from a small service lamp to large multiple compositions. The simple design, its functionality, sturdiness and dust protection, make it perfect for any setting: from contract to domestic.

Falena, wall

technical info
