

Invisible Table Tokujiin Yoshioka

Invisible Table is square-topped table the size and weight almost 20 kg of which mark a new and significant pioneering advance in the company's technological innovation but also in that of the industrial design world in general. Invisible Table surprises both for its aesthetics and for the extreme technology that has created it. This table is, in fact, produced by Kartell through the injection technique using a single mould that can handle the almost "off the scales" weight and the size and that guarantees its stability.

5070/5075

Transparent

B4/crystal	
E5/white matte	
J1/smoke	
VA/green algae	
AM/amber	
OT/teal	

Material

transparent or batch coloured PMMA
