FOSCARINI

A diffuser disc made from white plastic, a slim shape that evokes a 33 rpm vinyl record. The name given to this wall or ceiling lamp is Ellepi – an Italian acronym for long playing. The low-consumption light source follows the outline of the central ring and diffuses a glow that dims when moving closer to the outer shape of the lamp. This creates an elegant dimming that highlights the sophistication of the thicknesses and proportions. Ellepi is subtle yet highly effective, either on its own or in multiple compositions.

FOSCARINI

Alessandra Matilde

After training in theatre design in Venice, Matilde Alessandra moves first to London, where she designs interiors and installations for several years. Then she settles in New York in 1999, where she begins to produce her first luminous pieces. Her work has since moved on to include installations to industrial design, but it is always characterized by essential shapes and bright colours.
