Planet, suspension design Changedesign 2011

Planet is the result of Foscarini's ongoing exploration of the universe of materials and its desire to overcome the challenge of creating a fabric lamp without a frame inside. The idea, which sprang from a study of "smart clothing" for astronauts, commissioned by NASA and conducted by Dainese in conjunction with the MIT, was to use a fabric borrowed from the sailing world. Due to its texture and sewing process, this fabric would provide the frame of the lamp. Planet is actually the joining of three pieces of this high-tech fabric, handsewn, onto which an external embroidery is applied, acting both as decoration as well as a support. Depending on the colour of the embroidery, the personality of the lamp changes. In the red version, the special thread supporting the lamp creates a pattern that stands out on the white fabric. In the white version, the embroidery creates a precious yet discreet ton-sur-ton effect, a slight weft when the lamp is turned off, that turns into a back-lit decoration when the lamp is turned on. Innovative and familiar, pleasantly organic rather than cold and geometric, Planet distinguishes its setting with irresistible appeal, unprecedented presence and warm, cozy and welcoming luminosity. Available in two different sizes, it is ideal for use in several rooms throughout the home or in contract settings.

Planet, suspension technical info

FOSCARINI

Description

Suspension lamp with diffused light. Diffuser made of Polyethylene terephthalate, a material that is normally used to make clothing or sails, nylon embroidery cord. The manufacturing process envisages the stitching of various pieces of fabric, designed and cut for this purpose, to form a spherical volume. Epoxy powder coated metal mount, stainless steel suspension cable and transparent electrical cable. Ceiling rose with galvanised metal bracket and glossy white batch-dyed ABS cover, multi-Watt electronic transformer for the fluorescent version.

Canopy decentralisation kit available.

Materials: polyethylene terephthalate, nylon and metal

Colours: white/white, white/red

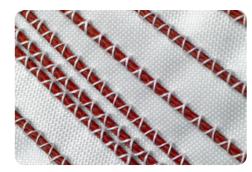

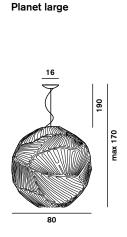

Brightness diffused light

Changedesign

Changedesign is a multidisciplinary studio made up of a group of designers from different countries working in industrial, interior, trade, retail and fashion design. Founded and directed by Renato Montagner, it has two offices: Venice and Milan. It has worked in partnership with Dainese, Invicta, 55DSL, Fiat and Louis Vuitton.
